

Display of different type of boulders on the orienteering maps of the BF5Days:

Our competition area is littered with rocks and boulders of all shape and sizes. To be able to distinguish between different types of rocks, Ingo our map maker has used the following distinction:

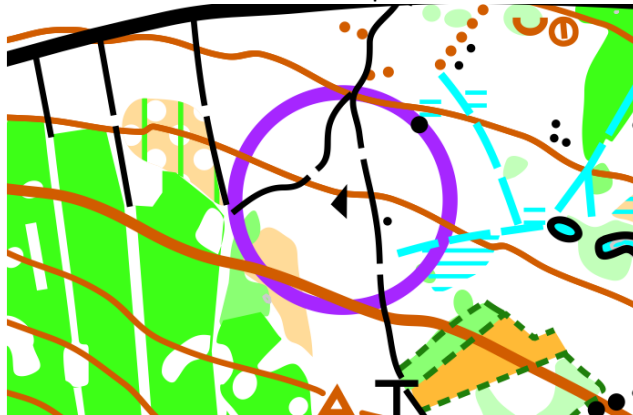

Symbol 208. 1: Boulder field (singular)

As a single symbol, this refers to an angular bolder which is wider than it is high. The direction of the symbol on the map equals the direction of the bolder in the forest.

In the forest:

On the map:

Symbol 204.0 Boulder

This symbol describes a rounded boulder which is higher than it is wide.
